Ref. to Corr<sup>n</sup> Record No 542.

Memorandum on a Correction Survey in Tp. 24 Range 1 W. of 5<sup>th</sup> J. M.

In accordance with instructions dated the 2<sup>nd</sup> day of Sept. 1891 I made a resurvey of D. L. S. Belanger's Survey of Boulevard through this Section and although differing from him somewhat in the various bearings. I was forced to conclude that the various decayed roots of stakes were the remnants of the original stakes of such survey owing to the measurements of the different courses and the slighter liability to entire removal than of the same survey stakes through sections further east where in part the land had come under cultivation and the rest was favorite camping ground for traders and freighters. This survey is shown on the map in red. In making survey for proposed alteration in the position of Boulevard through this section which alteration is desired by the present owners of property that in its new position it will not be flooded in consequence of the erection of a dam on this section across Bow River; I placed the iron bars and pits on the north side thereof that they would correspond with any resurvey of the balance of Boulevard that might be made in the future. On the map this survey is shown in black.

Dated 4<sup>th</sup> Feb. 1892. (Sgd.) Jas A. Macmillan D. L. S.
